

And there was Israel

Author/Director: Romed Wyder

Producer: Les Films de l'oeil sauvage

Country: Switzerland - France

Length: 52'

The film returns to the origins of the creation of the State of Israel and looks at the history of Zionism (1896-1948) under the very specific angle of the responsibility of the Western World. Through the analysis of internationally renowned scholars and astonishing cinematographic archives, the film shows that in adopting the zionist project, Great Britain and other Western countries have been guided mainly by their own agenda. Thus the West does not only bears a heavy responsibility in terms of the fate of Jews in Europe at the time, but also in terms of the fate of the Palestinians today.
